

## ACRYFILL SOFT W-421

### CHEMICAL COMPOSITION

Silicon in watery emulsion

#### CHARACTERISTICS

<i>Appearance:</i>	<i>creamy liquid, white</i>
<i>Active substance:</i>	<i>about 8%</i>
<i>Phase:</i>	<i>watery</i>
<i>Use:</i>	<i>touch modifier</i>

### PROPERTIES

**ACRYFILL SOFT W-421** is a silicon based touch modifier, dilutable in water to be used in combination with nitroemulsion.

Moreover, **ACRYFILL SOFT W-421** can be used in finishing glazed for caseinic fixatives.

The characteristics are: natural touch, warm, slippery.

### USE

We suggest use of **ACRYFILL SOFT W-421** from 1 to 5% calculated on the lacquer weight: the leathers treated in this way have a surface with higher resistance to scratches.
