

ACRYFILL TOP CA

CHEMICAL COMPOSITION

Proteins, plasticisers

CHARACTERISTICS

<i>Appearance:</i>	<i>beige liquid</i>
<i>pH in solution at 10%:</i>	<i>8 - 9</i>

PROPERTIES

ACRYFILL TOP CA is a light, semi-transparent viscous liquid of a slightly basic reaction.

It is a natural proteic based binder that contains no waxes and can be used in various ways.

Adding it to the rich resin binder mixtures, it improves the leather fullness and the film adhesion, removes the stickiness and increases its general resistance.

The films obtained using **ACRYFILL TOP CA** can be fixed with formaldehyde and are characterized by high rubbing fastness and solidity to hot iron.

The films are glossy, transparent and of a pleasant warm and classical touch.
