

ACRYFILL TOP CM20

CHEMICAL COMPOSITION

Solution of modified protein based matters

CHARACTERISTICS

<i>Appearance:</i>	<i>yellowish dense liquid</i>
<i>Active substance:</i>	<i>about 20%</i>
<i>pH in solution at 10%:</i>	<i>7 - 8</i>
<i>Phase:</i>	<i>watery</i>
<i>Use:</i>	<i>grounds, fixatives</i>

PROPERTIES

ACRYFILL TOP CM20 is a non-thermoplastic binder, well compatible with all finishing products, and allowing pigmentation and colouring.

ACRYFILL TOP CM20 forms a film which does not require further plasticization and maintains in due course of time flexibility and elasticity properties.

When used with polymeric binders, **ACRYFILL TOP CM20** decreases thermos-plasticity of the same, increasing solidity and elasticity properties.

If used basic binder in full grain leather, it can be very well polished/glossed vide machines.
