

## ACRYFILL PREFONDO NRE

### CHEMICAL COMPOSITION

Resins, proteins, waxes

#### CHARACTERISTICS

<i>Appearance:</i>	<i>dense paste</i>
<i>Active substance:</i>	<i>13%</i>
<i>Phase:</i>	<i>watery</i>
<i>Product uses:</i>	<i>touch modifier</i>

### PROPERTIES

**ACRYFILL PREFONDO NRE** is an resinous auxiliary formed by thickening acrylates with ammonia and containing small percentage of modified proteins and conveniently plasticized waxes. **ACRYFILL PREFONDO NRE** can be applied successfully in polishable grounds.

Has a good hand and leaves a fine grain, without effecting the anchorage of successive finishing treatments.

**ACRYFILL PREFONDO NRE** allows to match the irregular absorption of the leather and to reduce considerably the low grain and the tendency of the fine grain leathers, like calf box, to become grey.
