

ACRYFILL WAX RLC

CHEMICAL COMPOSITION

Emulsions of resins and waxes in water

CHARACTERISTICS

<i>Appearance:</i>	<i>white liquid</i>
<i>Ionic charge:</i>	<i>anionic</i>

PROPERTIES

ACRYFILL WAX RLC is a compound formed by particularly valuable products, obtaining an effect of considerable footwear and clothing and leather goods repolishing even if the leather has a light finishing, obtaining a significant improvement in the quality of the treated skin, furthermore it has a great repolishing effect.

ACRYFILL WAX RLC can be coloured by pigments-anilines or applied as it is, deciding when diluted for the desired effect. Is preferable, after application, do not iron the final treated leathers, to avoid the melting of the product and cancel its effect.
