<i>Storage:</i>	<i>closed in a drum it can be preserved for 12 months</i>

PROPERTIES

DIMITROL FIX is an auxiliary able to replace formaldehyde in fising products to the casein. Percentages vary according to the finishing mixture used, normally between 8 and 17% on the finishing mix. It can also be used after finishing, by spraying it, using a mixture of 10% of **DIMITROL FIX** in water, better if corrected in acetic acid. In this case it is recommended to wet the finished skin well, which must not be dried excessively. It is recommended when used in intermediate coats to not leave the skin at high temperatures or for lengthy times, so as to improve the adhesion of the final coat. The reticulation of the fist coats will continue after the application of the final coat. for effect of the heating operations. The dispersion of the product is very simple: manual mixing is sufficient and risk of coagulation does not normally exist in the finishing mix. In the case of long periods of storage it is recommended to mix it before use. The product is dilutable in all ratios with cold water.
