

BERFAT TY

FATLIQUOR FOR DRUMS

CHARACTERISTICS

Appearance: *ivory colored paste*

pH in solution at 10%: *7 - 8*

PROPERTIES

BERFAT TY is a mixture of fatliquors based on bovine tallow which is used only on vegetable tanned skins.

Thanks to its complex characteristics it is used as a single fatliquor to create leather goods and footwear articles where a consistent and full feel (as cowhide) needs to be obtained. It can also be used in a mixture with other oils after checking the compatibility.
