

## BERFILLER P

*FILLING AUXILIARY*

### CHEMICAL COMPOSITION

Blend of mineral salts and organic substances

### CHARACTERISTICS

<i>Appearance:</i>	<i>grey powder</i>
<i>Active substance:</i>	<i>90 - 100%</i>

### PROPERTIES

**BERFILLER P** is used on every sort of chrome-tanned skin, where very good fullness characteristics are required.

**BERFILLER P** acts on the skin in a very selective way, giving fullness to empty areas and ensuring a grain thickening and evenness in all the treated skin.

**BERFILLER P** can be used on corrected grain skins, on splits destined to suede in order to improve the buffing characteristics.

**BERFILLER P** having a good light-fastness, is used not only for the production of white skins, but also on pastel dyed ones without alternating the colour hue.

### USAGE METHOD

It is advisable to mix it well with substances that are used as vehicles. During the retanning phase you use from 2% to 4% for the upper and from 2% to 8% for the splits.

During the fatiquoring stage you use from 1% to 3% in blend with oils. The percentages above reported refer to the shaved weight.
