

BERMASI PIK

ENZYMATIC BATING PRODUCT FOR PICKLING

CHEMICAL COMPOSITION

Combination of proteolytic enzymes

CHARACTERISTICS

Appearance: beige powder

Activity field: pH 3 – 4

Usage temperature: 30 - 35° C

PROPERTIES

BERMASI PIK is a powdered enzymatic bating agent, that carries out its work in a field of pH between 1,0 and 4,5, therefore it can be used for bating in pickling bath.

BERMASI PIK can be used for bating of pelts of different origins, then you can bate pickled cattle and ovine skins, pickled hard skin, or for the treatment in wet blue skin.

BERMASI PIK is compatible with polyphosphates and surfactants like ECOPOL series that can be used at the same time to obtain a better final cleaning of the skins.

USAGE METHOD

You have to consider the type of skins to be treated in order to calculate the usage percentages, but we can sum up as following:

you can use from 0,2% to 0,5% of **BERMASI PIK** for the upper;

you can use from 0,3% to 0,6% of **BERMASI PIK** for the nappa.

In addition, it is advisable to add to the bath **BERMASI PIK** without solving it previously, checking that the temperature is not over 45°C because the product loses its enzymatic activity.
