

DIMITROL FN

SOAKING AUXILIARY

CHEMICAL COMPOSITION

Specific combination of surfactants and reducing substances

CHARACTERISTICS

<i>Appearance:</i>	<i>opaque semi-dense yellow</i>
<i>Active substance:</i>	<i>about 10%</i>
<i>pH in solution at 10%:</i>	<i>12 - 13</i>

PROPERTIES

DIMITROL FN is used in the soaking of raw hides, where its particular chemical formulation allows the inflating only of the meat part of the skin and thus makes possible the fleshing of fur.

DIMITROL FN is added in the liming in the second installment of sulfide and lime, greatly favors the swelling of the entire skin.

DIMITROL FN improves the cleaning of the grain, stretches the wrinkles on the sides and helps to remove the hair bulb degreasing the surface.

USAGE METHOD

With water at 30 ° C add 1 to 1.5% of **DIMITROL FN** and rotate for three hours, then fleshing.

Alternatively in the second installment of lime and sulfide use 0,5% of **DIMITROL FN** and rotation for 1 hour.
