

DIMITROL STP90

SEQUESTERING AGENT

CHEMICAL COMPOSITION

Mixture based on polyphosphates

CHARACTERISTICS

<i>Appearance:</i>	<i>white powder</i>
<i>pH in solution at 10%:</i>	<i>8 - 9</i>
<i>Solubility:</i>	<i>soluble</i>

PROPERTIES

DIMITROL STP90 has been developed for specific needs of the market, where it was requested a cheap product that could still have a sequestering effect on calcium and magnesium salts.

DIMITROL STP90 can be used to soften hard water both in the soaking that in the washings of skins and however where a sequestering action is requested on above mentioned cations.

USAGE METHOD

DIMITROL STP90 in hard water is added to the washing baths of the hides in percentage from 0.2 to 0.3% in order to prevent the precipitation of insoluble carbonate on the flower.

DIMITROL STP90 in the washes of wet blue eliminates stains, regularizing thereby the surface and improving the dye.
