

## DPG

FATLIQUORING AUXILIARY

### CHEMICAL COMPOSITION

Dipropylene glycol

### CHARACTERISTICS

<i>Appearance:</i>	<i>transparent liquid</i>
<i>pH in solution at 10%:</i>	<i>6,5 - 7,5</i>

### PROPERTIES

**DPG** is used to give a humidifying effect to the leathers; it can be used in fatliquoring blend to confer a less dry touch after drying, thanks to its wetting effect.

The use of the product depends on the season, dry or humid, and on drying type.

We recommend to carry out some preliminary tests to calculate the amount to be used in order to obtain the requested humidity percentage.

### USAGE METHOD

We recommend amounts from 0,1 to 1% depending on individual requirements.
