

ELCATAN ANF

SYNTHETIC TANNIN

CHEMICAL COMPOSITION

Product based on dihydroxy-diphenyl-sulphone,
free from formaldehyde

CHARACTERISTICS

<i>Appearance:</i>	<i>clear powder</i>
<i>pH in solution at 10%:</i>	<i>3,5 – 4,5</i>

PROPERTIES

ELCATAN ANF is used both in tanning and retanning for the production of all types of white leather, on its own or in combination with natural tannins. Furthermore, it can be used in the retanning of chrome hides, after the neutralisation, or for the bleaching of vegetable leathers.

USAGE METHOD

12 - 15% on the shaved weight for the retanning of chrome white hides
3 - 5% on the shaved weight, mixed with vegetable tannins, for the retanning of chrome hides
8 - 10% on the shaved weight for a clear remounting on vegetable leathers
