

ELCATAN NK

SYNTHETIC TANNIN

CHEMICAL COMPOSITION

Condensation of aromatic sulfonic acid

CHARACTERISTICS

Appearance: light brown liquid

pH in 10% solution: 4,5 – 5,5

PROPERTIES

ELCATAN NK is a synthetic replacement tannin which gives soft, full and fine grain leather.

Its particular composition makes it ideal for re-tanning of leather where softness is required, like garment nappa, upholstery and shoe.

ELCATAN NK can be used in combination with other synthetic or natural tannins, obtaining fullness part from softness.

USAGE METHOD

4 to 10% is recommended according to the article.
