

ELCATAN R6 CONC

RETANNING RESIN

CHEMICAL COMPOSITION

Melamine-resin-based product

CHARACTERISTICS

<i>Appearance:</i>	<i>clear powder</i>
<i>pH in solution at 10%:</i>	<i>8 - 9</i>
<i>Ionic charge:</i>	<i>anionic</i>

PROPERTIES

ELCATAN R6 CONC is a melamine-resin-based retanning agent providing round and full touch, fine and close grain, above all in the emptier parts of leather.

Considering its anionic character, **ELCATAN R6 CONC** is compatible with all the anion-active tanning agents and dyestuffs.

ELCATAN R6 CONC can be used for nubuk and suede articles because it improves buffability.

USAGE METHOD

After neutralization, because **ELCATAN R6 CONC** is not stable at pH values below 3 and is not resistant to mineral tanning agents.
