

ELCATAN SRV

UNIVERSAL RETANNING AGENT

CHEMICAL COMPOSITION

Phenol-naphthaline-sulphonic condensation

CHARACTERISTICS

| | |
|-------------------------------|---------------------|
| <i>Appearance:</i> | <i>clear powder</i> |
| <i>pH in solution at 10%:</i> | <i>3 – 4</i> |

PROPERTIES

ELCATAN SRV thanks to its particular characteristics, confers a good tingeability, fine grain and an optimum filling effect to the hide.

ELCATAN SRV used contemporaneously with vegetable tannins, operates a deep and homogenous penetration.

ELCATAN SRV is a universal retanning agent that does not overload the grain, but makes it firm and fine.

Used in vegetable pretanning, it assists in obtaining firm, full and smooth leathers and permits the use of lesser quantities of vegetable tannins, thanks to a high dispersive action.
