

## ELCATAN WB6

*DISPERSANT TANNIN*

### CHARACTERISTICS

<i>Appearance:</i>	<i>beige powder</i>
<i>pH in solution at 10%:</i>	<i>5,5 – 6,5</i>

### PROPERTIES

**ELCATAN WB6** is a synthetic tannin developed to improve the dyeing of leather, ensuring total uniformity.

**ELCATAN WB6** used in chrome retanning with vegetable extracts has a strong dispersing action, very important to obtain a uniform retanning and in greater depth, while avoiding breaking of the flower or the tendency to crack.

### USAGE METHOD

In most applications it is used from 1 to 3% of **ELCATAN WB6** calculated on the shaved weight.
