

OSSIDO M100

BASIFICANT FOR CHROME TANNING

CHEMICAL COMPOSITION

Mixture of basificated salts

CHARACTERISTICS

<i>Appearance:</i>	<i>fine grey powder</i>
<i>pH in solution at 10%:</i>	<i>11-12</i>
<i>Active substance:</i>	<i>approximately 100%</i>
<i>Solubility:</i>	<i>90%</i>

PROPERTIES

OSSIDO M100 is a mixture of basificant salts that permit a very gradual basification of the chrome that starts inside and goes towards the outside of the hide.

Its use obtains an optimal exhaustion of the chrome salts, a pH at the end of the tanning process around the standard values (3.8 – 3.9) and a uniform colour of the tanned hide.

USAGE METHOD

Usage doses are relative to the type of chrome used.
