

PENETRANTE E10

DYE PENETRATING

CHARACTERISTICS

<i>Appearance:</i>	<i>transparent colourless liquid</i>
<i>Solubility:</i>	<i>soluble in water and organic solvents</i>
<i>Character:</i>	<i>nonionic</i>

PROPERTIES

PENETRANTE E10 has a high penetration capacity used, mixed with dyes, it increases the penetration deepness in the leather.

PENETRANTE E10 increases absorbing power of the leather without increasing water absorbing, which occurs if other auxiliaries of ammonium based products are used.

Diluted **PENETRANTE E10** is compatible with auxiliaries used in dyeing. The products has to be added in the last phase to the dye solutions: that is when necessary quantity of water has been added.

The usage methods of the products are not within our control and therefore become the complete responsibility of the purchaser. We guarantee the quality of our products in respect of the general sales and supply terms and conditions.

PENETRANTE E10 is suggested for suede leathers due low quantity of foam generated, its highlighted that apart from a better penetration and uniformity, a equal colouring and a full leather is obtained. **PENETRANTE E10** is used for wetting-back of all type of leathers and crust, where it replaces the use of ammonia, avoiding to remove sensible re-tannins and obtaining a good penetration. Excellent equalizing and penetrating of colour results are obtained with BERGANIL PA and **PENETRANTE E10** in ratio 1:1

USAGE METHOD

Crust velour: 1-3% dry weight

Vegetable crust: 1-3% dry weight

W.B: 0,5-1% shaved weight
