

RESIFILL A30D

RETANNING RESIN

CHEMICAL COMPOSITION

Acrylic interpolymer

CHARACTERISTICS

<i>Appearance:</i>	<i>dark coloured resin</i>
<i>Dry content:</i>	<i>25 - 30%</i>
<i>pH in solution at 10%:</i>	<i>6 - 7</i>
<i>Ionic charge:</i>	<i>anionic</i>

PROPERTIES

RESIFILL A30D is a special retanning agent for chrome leathers. Its special retanning action allows to achieve full leathers, without modifying their grain fineness.

In retanning, **RESIFILL A30D**, provides fullness without affecting grain fineness and firmness, moreover the typical aspect of chrome leather remains unchanged, though some synthetic vegetable retanning agents are still necessary.

RESIFILL A30D is light-fast and offers even and slightly lighter dyes. In case of light-coloured leathers, together with white tanning agents, you will obtain an even higher white degree.
