

## RESIFILL A30R

### RETANNING RESIN

#### CHEMICAL COMPOSITION

Acrylic interpolymer

#### CHARACTERISTICS

<i>Appearance:</i>	<i>colorless thick liquid</i>
<i>Dry content:</i>	<i>25 - 30%</i>
<i>pH in solution at 10%:</i>	<i>6 - 7</i>
<i>Ionic charge:</i>	<i>anionic</i>

#### PROPERTIES

**RESIFILL A30R** is a special retanning agent for chrome leathers. Its particular retanning action can get a full leather, without altering the fineness of grain.

It is viscous, but well pourable and easy to be diluted by the addition of hot water. The product is sensitive to acids and with pH values less than 3 can precipitate and can be only partially mixed with cationic products (for example: mineral tanning agents).

With synthetic and vegetable tanning agent, fats licker, sulphited, anionic dyes and other products anionattivi, the **RESIFILL A30R** does not give rise to any problems in the usual concentrations of use, provided that the pH does not drop below the limit mentioned. In the retanning **RESIFILL A30R**, gives fullness to the leathers without impairing the delicacy and firmness of the flower and acts in such a way that even the typical character of chrome leather remains unchanged, even if they are still needed synthetic retanning vegetable.

**RESIFILL A30R** is lightfast and provides uniform and slightly cloudy dyes. For light colored leather, along with tannings white, one obtains an even higher degree of whiteness.
