

SILIKON BS

SILICONIC ANTIFOAMING AGENT

CHEMICAL COMPOSITION

Silicon oil in emulsion

CHARACTERISTICS

| | |
|---------------------------------|------------------------------------|
| <i>Appearance:</i> | <i>white coloured dense liquid</i> |
| <i>Effective concentration:</i> | <i>from 10 to 3 mg/kg ppm</i> |
| <i>pH in solution at 10%:</i> | <i>6,5 – 7,5</i> |
| <i>Dilution system:</i> | <i>water</i> |

PROPERTIES

SILIKON BS is an excellent silicone anti-foam and its effect against the foam is immediate.

SILIKON BS can be used as it is or prediluted in water. Its emulsions, even if very diluted, are stable.

SILIKON BS is used in several industrial fields, where there are problems due to an excessive foam formation; so it is suitable for depuration plants as well as for any other industrial process that produces foam.

USAGE METHOD

SILIKON BS is a product easily dilutable in water. The dilution does not reduce its exceptional speed of foam elimination.
