

SILIKON KFL

SILICONIC ANTIFOAM

CHEMICAL COMPOSITION

Silicon oil in emulsion

CHARACTERISTICS

<i>Appearance:</i>	<i>white coloured liquid</i>
<i>Effective concentration:</i>	<i>from 10 to 30 mg/Kg ppm</i>
<i>pH in solution at 10%:</i>	<i>6 – 7</i>
<i>Dilution system:</i>	<i>water</i>

PROPERTIES

SILIKON KFL can be used as it is or prediluted in water. Its emulsions, even if very diluted, are stable.

SILIKON KFL is used in several industrial fields, where there are problems due to an excessive foam formation; so it is suitable for depuration plants as well as for any other industrial process that produces foam.

An important characteristic of **SILIKON KFL** is its resistance to below-zero temperature that allows an easy use during the cold months, thus avoiding an annoying thickening or freezing of the product.

USAGE METHOD

SILIKON KFL is a product easily dilutable in water. The dilution does not reduce its exceptional speed of foam elimination.
