

SILIKON ST

SILICONIC ANTIFOAMING AGENT

CHEMICAL COMPOSITION

Silicon oil in emulsion

CHARACTERISTICS

<i>Appearance:</i>	<i>white coloured dense liquid</i>
<i>pH in solution at 10%:</i>	<i>6,5 – 7,5</i>
<i>Dilution system:</i>	<i>water</i>

PROPERTIES

SILIKON ST is an excellent silicone anti-foam and its effect against the foam is immediate.

SILIKON ST can be used as it is or prediluted in water. Its emulsions, even if very diluted, are stable.

SILIKON ST is used in several industrial fields, where there are problems due to an excessive foam formation; so it is suitable for depuration plants as well as for any other industrial process that produces foam.

USAGE METHOD

SILIKON ST is a product easily dilutable in water. The dilution does not reduce its exceptional speed of foam elimination.
